
Hydraulic Seals Wear Ring Bush Bear Ring Bush

Hydraulic Wear Rings and Guide Rings

In Hydraulic cylinders, hydraulic wear rings and guide rings are very important. The guide ring or wear ring guides a hydraulic cylinder piston and rod and absorbs lateral forces. Metal-to-metal contact between the moving parts of the cylinder, for instance between the piston and the cylinder or the rod and the cylinder head. Hydraulic wear ring has phenolic resin fabric WR, POM WR, and nylon WR. The hydraulic guide ring has PTFE bronze and POM.

JSPSEAL is a hydraulic seals factory in China. JSPWR hydraulic wear rings and guide rings are best-selling hydraulic seals. Has metric and inch hydraulic wear rings, all hydraulic seals are applied for CATERPILLAR, JOHN DEERE, VOLVO, and KOMATSU...JSPSEAL hydraulic wear ring has high toughness, good water absorption, and low price.

The new type of JSPWR we developed especially for Sany and XCMG has a high-temperature resistance of 250°, and its high-temperature resistance is twice that of ordinary phenolic resin materials. It is often used in heavy loaders. The size can be produced from 20-1400mm. And we also sell hydraulic wear ring tubes.

Advantages:

- Avoid direct contact between metal parts.
- Dimensional stable and vibration absorbing.
- Self lubricating, good sliding and fry ruining properties.
- High wear resistance ensure long service life.
- Resistance to most fluids and chemicals.
- High load capability

-Simple closed groove, easy installation.

-Low service costs.
